*a Designates an adhesive weight must be used

1 Sebring and Stratus Coupes in 2001 and 2002 require IAWC weights.

2 Some models are equipped with alloy wheels requiring adhesive weights. Many of these wheels are designed with an outside flange.

The weight indicated is for an inside flange while adhesive weights are required for the outside balance location.

3 Some models are equipped with "Polycast" wheels requiring MCC weights on the outside and B weights on the inside.

4 Two wheel options available. One uses MCC series and the other uses TC series weights.

5 Optional chrome plated wheels require TC weights.

6 Certain models require AWC series weights

7 Vehicles equipped with 16" alloy wheels require special NT series weights.

8 Ford F150 LIGHTNING edition uses MCC series weights

NOTE: Chrome plated wheels are available on many models. We recommend the use of adhesive weights to prevent damage to the chrome finish.
